Professional Summary

AI and data services consultant based in Melbourne, with a strong foundation in government data operations, AI workflow design, and digital systems. Spent over 2000 hours in hands-on training with leading AI models since 2021 — not just using AI tools, but understanding how they reason, where they fail, and how to govern them safely in real business environments.

Most recently served as a Data Support Officer at Revenue NSW, where I worked with large-scale datasets, built custom validation pipelines, and supported multi-million dollar debt operations. I now bring that same data discipline into AI consulting through **NeuraNest**, helping businesses identify where AI can genuinely improve operations — and where it can not.

I offer **Branding Optimising and Digital Audit** as an entry point: a structured review of a business's current digital and data workflows, with specific, actionable AI integration recommendations.

> ⓘ Available for contract, part-time, or project-based roles in Melbourne and remotely. Entry-level to mid-level AI, data, and digital services work considered.

Experience & Key Achievements

Consultant & Founder — NeuraNest AI Melbourne

November 2024 – Present

- Built and deployed an AI-powered Digital Auditor application to analyse and improve digital strategy for small businesses.
- Developed over 50 landing pages and React applications, including the M&M Accommodation platform with integrated Google APIs.
- Created AR/VR educational application and content for professional training contexts.
- Designed and managed AI agent workflows for automated content generation, client communications, and data processing.
- Produced educational video content (NeuraNest Explainer Series) reaching 10,000+ views in the first three months.

Data Support Officer — Revenue NSW

June 2023 – October 2024

- Analysed and consolidated complex datasets to support the efficiency of multi-million dollar debt collection operations.
- Optimised custom validation pipelines that improved data accuracy and reduced manual review cycles.
- Maintained data integrity and compliance with state government data governance standards.
- Worked across large structured datasets using Excel, data tools, and custom logic pipelines.

Support Officer / Digital Champion — Services Australia Surge Taskforce

January 2022 – March 2023

Services Australia | Department of Foreign Affairs and Trade | Australian Electoral Commission | Department of Veteran Affairs

- Delivered critical government support to Australians during natural disaster emergencies, managing high volumes of complex inquiries.
- Led digital adoption initiatives, helping clients transition to online government services during national emergencies.
- Recognised as a Digital Champion for promoting effective use of digital platforms within the taskforce.
- Implemented the use of reverse image search for time optimisation and reduction.

IT Consultant — Cyber Smart, Australia

2018 – 2022

- Advised e-commerce businesses on digital content strategy and analytics-driven campaign optimisation.
- Implemented structured digital workflows to improve client marketing ROI.

- Diploma in Government Security — Australian Forensic Services, Canberra
- Diploma in Security & Risk Management — Australian Forensic Services
- AWS Cloud Essentials (2023)
- Microsoft Azure Fundamentals (2023)
- Digital Practitioner Member — Australian Government (2023)

About My Approach

> I work from a framework I call **Industrial Intelligence**: the idea that AI is most valuable not as an oracle, but as a precision extraction tool — one that works on verified local data, guided by domain expertise, to surface insights humans can act on.

This comes directly from my government data background, where accuracy and accountability are non-negotiable. I bring the same standard to every client engagement.
