Professional Summary

AI and data services consultant based in Melbourne, with a strong foundation in government data operations, AI workflow design, and digital systems. Spent over 2000 hours in hands-on training with leading AI models since 2021 — not just using AI tools, but understanding how they reason, where they fail, and how to govern them safely in real business environments.

Experience & Key Achievements

Consultant & Founder — NeuraNest AI Melbourne

November 2024 – Present

- Built and launched an AI Digital Auditor for small-business strategy reviews.
- Developed 50+ landing pages and React apps, including M&M Accommodation with Google APIs.
- Created AR/VR training content and educational applications.
- Designed AI agent workflows for content, client comms, and data processing.
- Produced the NeuraNest Explainer Series, reaching 10,000+ views in 3 months.

Data Support Officer — Revenue NSW

June 2023 – October 2024

- Analysed and consolidated complex datasets for multi-million dollar debt operations.
- Improved validation pipelines, cutting manual review and boosting accuracy.
- Maintained data integrity and compliance with state government standards.
- Worked with large structured datasets using Excel, data tools, and custom logic pipelines.

Support Officer / Digital Champion — Services Australia Surge Taskforce

January 2022 – March 2023

Services Australia | Department of Foreign Affairs and Trade | Australian Electoral Commission | Department of Veteran Affairs

- Delivered government support during natural disaster emergencies.
- Helped clients move to online services during national emergencies.
- Recognised as a Digital Champion for driving digital adoption.
- Introduced reverse image search to save time.

IT Consultant — Cyber Smart, Australia

2018 – 2022

- Advised e-commerce businesses on digital content strategy and analytics.
- Built structured workflows to improve marketing ROI.

About My Approach

> I work from a framework I call **Industrial Intelligence**: the idea that AI is most valuable not as an oracle, but as a precision extraction tool — one that works on verified local data, guided by domain expertise, to surface insights humans can act on.

This comes directly from my government data background, where accuracy and accountability are non-negotiable. I bring the same standard to every client engagement.
